

What Is Claimed Is:

1. An actuator assembly of a suspension, comprising:

a lever provided with first and second brackets and hinged to a sub frame;

5 an actuator coupled to the first bracket on one end thereof; and

a movable member rotating the actuator.

2. The actuator assembly as claimed in claim 1, wherein the movable is a hinge

unit mounted on the actuator.

10

3. The actuator assembly as claimed in claim 1, wherein the first bracket has an

insert hole which takes a circular shape.

4. The actuator assembly as claimed in claim 2, wherein the first bracket has an

15 insert hole which takes a circular shape.
